So, in few words, game theory is the study of taking optimal decisions in presence of multiple players (agents). Thus a game is a simplified, yet very efficient, model of real life every day situa- tions. Though the first, and probably more intuitive, applications of the theory were in an economical setting, theoretical models and tools of this ...

Football game 1 2 Boxing Match 3 0 Hike 0 1 For Let denote the probability of rain. (a) Is there an alternative that a rational player will never take regardless of θ ? (i.e., it is dominated for any $\theta \in [0, 1]$.)

Answer: For this decision maker choosing the hike is always worse (dominated) by going to the football game, and he should never go on

~~Solution Manual Game Theory: An Introduction~~

Game theory is the study of multiperson decision problems. Such problems arise frequently in economics. As is widely appreciated, for example, oligopolies present multiperson problems — each firm must consider what the others will do. But many other applications of game theory arise in fields of economics other than industrial organization.
