This book documents the state of the art in the field of ambient assisted living (AAL), highlighting the impressive potential of novel methodologies and technologies to enhance well-being and promote active ageing. The coverage is wide ranging, with sections on care models and algorithms, enabling technologies and assistive solutions, elderly people monitoring, home rehabilitation, ICT solutions for AAL, living with chronic conditions, robotic assistance for the elderly, sensing technologies for AAL, and smart housing. The book comprises a selection of the best papers presented at the 9th Italian Forum on Ambient Assisted Living (ForitAAL 2018), which was held in Lecce, Italy, in July 2018 and brought together end users, technology teams, and policy makers to develop a consensus on how to improve provision for elderly and impaired people. Readers will find that the expert contributions offer clear insights into the ways in which the most recent exciting advances may be expected to assist in addressing the needs of the elderly and those with chronic conditions.

The study of surfaces has experienced dramatic growth over the past decade. Now, the editors of the internationally celebrated series *Advances in Chemical Physics* have brought together in this self-contained, special topic volume contributions from leading researchers in the field treating some of the most crucial aspects of the experimental and theoretical study of surfaces. This work delves into such core issues as: \* Kinetics and dynamics of hydrogen adsorption on silicon surfaces. \* Potential energy surfaces of transition- metal-catalyzed chemical reactions. \* High-resolution helium atom scattering as a proof of surface vibrations. \* Ordering and phase transitions in adsorbed monolayers of diatomic molecules. \* The influence of dimensionality on static and dynamic properties of a system. \* New applications to fields as varied as catalysts and the passage of molecules through membranes. This valuable resource provides important insights into the current state of knowledge about surface properties. Prigogine and Rice's latest work will stimulate the imagination and motivate the exploration of other aspects of this fascinating subject.

Jared Martinez traded the forex market for a decade through the 1980s and '90s before he discovered that successful trading requires 10 percent skill and 90 percent emotional intelligence. He founded the Market Traders Institute on that underlying principle, and now MTI is the most established leader in forex education worldwide. Jared is known as “FXCHIEF” in the industry, and now, in *The Forex Mindset*, he shares his secrets with you. Leadership experts and corporate executives are just waking up to what the FXCHIEF has known for more than 15 years—emotional intelligence matters. With *The Forex Mindset*, you get up close and personal with greed and fear, the two leading forces in the market. Everyone gets in for

greed, but without a healthy understanding of fear, you may be in for one of the worst journeys of your life. This performance-oriented guidebook features a potent synthesis of psychology and strategy that will exponentially increase your ability to acquire wealth as a trader. Even veteran traders with bulletproof trading strategies are doomed to fail if they don't know themselves. The Forex Mindset prepares you to be a successful trader by helping you identify your unique psychological strengths and weaknesses and how you naturally behave in times of financial crisis. With a newfound understanding of yourself, you can use this book to map out your own path to wealth by: Delving into human nature and market behavior Learning how to improve your emotional intelligence Doing what top traders do to control their emotions in trades and in times of crisis Implementing authoritative strategies for effective thinking in a state of fear If you want to make a living from trading forex, apply the lessons in The Forex Mindset and you're already 90 percent there!

This is a seven volume treatise on historical dating and scientific arguments regarding the truth or falsehoods in currently accepted historical concepts. It claims the 16th century as the time during which history was created by medieval scribes and cemented by the power of the ecclesial authorities. It is theorized for example that Jesus was actually born in 1053 A.D. and crucified in 1086 A.D.; the Old Testament refers to medieval events and the Apocalypse was written after 1486 A.D.

Ballast water management is a complex subject with many issues and still limited knowledge, however, it is building up on new scientific researches and practical experience. The Ballast Water Management Convention is the global legal framework which still needs to be implemented. This book brings together a long-term and newest experience from practical work, scientific research, administration and policy involvements, offering unique insights to readers who would like to learn more about this subject. It also provides recommendations and practical solutions especially important for professionals, administrations and organizations in the process of the implementation of this Ballast Water Management Convention.

Nanocolloids: A Meeting Point for Scientists and Technologists presents an easy-to-read approach to current trends in nanoscale colloid chemistry, which offers relatively simple and economically feasible ways to produce nanomaterials. Nanocolloids have been the subjects of major development in modern technology, with many current and future applications. The book helps scientists and technologists to understand the different aspects of modern nanocolloid science. It outlines the underlying fundamental principles of nanocolloid science and covers applications ranging from emulsions to dispersions and suspensions. You will find details on experimental techniques and methods for the synthesis and characterization of nanocolloids, including the latest developments in nanoemulsions and nanoparticles. Edited by leading academics with over 10 years' experience in the field of colloid and surfactant science. Each chapter is authored by recognized experts in the field. Outlines the underlying fundamental science behind nanocolloids. Provides comprehensive coverage of current topics and potential applications in nanocolloid science. Presents a multidisciplinary approach to help chemical engineers, chemists, physicists, materials scientists and pharmacologists, form an in-depth understanding of nanocolloid science.

This book systematically describes free-standing films and self-supporting nanoarrays growing on rigid and flexible substrates, and discusses the numerous applications in electronics, energy generation and storage in detail. The chapters present the various fabrication techniques used for growing self-supporting materials on flexible and rigid substrates, and free-standing films composed of semiconductors, inorganic, polymer and carbon hybrid materials.
