governments.

Given that public budgeting is a political process in which public officials make value choices for society, understanding public budgeting is understanding power. *Public Budgeting: Politics, Institutions, and Processes* acknowledges the political power of budgeting, examines its concepts and mechanics, and assesses the political implications of its supposedly apolitical, scientific techniques. A clear, concise policy overview of what budgets mean and how they are used, *Public Budgeting* discusses both economic theory and the practice of budget politics. It is the only text offering extensive coverage of public budget creation while placing the budgeting process within its political context. Its logical organization and broad yet accessible coverage introduce students of public budgeting and public administration to all key aspects of budgeting while stressing capital budgeting and budgeting techniques.

This *Public Expenditure and Institutional Review* presents the findings of an analysis of the budget, and institutions of public expenditure management, and accountability, fundamental to policy decisions, and economic management. It builds on extensive analysis undertaken by the Special Ad Hoc Committee on Fiscal Transparency, and Public Finance,

and, the review suggests that the current economic crisis is deep-rooted in the institutions of collective decision making in government, confirming that unless fundamental improvements are made to the processes for formulating public policy, allocating resources, and implementing budgets, any economic recovery will almost certainly be fragile, and short-lived. Thus, from the perspectives of system performance, and structural and institutional aspects, an improved budgetary system should enable the government to achieve aggregate fiscal magnitudes, based on expenditures, sustained by tax, and non-tax resources; the budget should generate the adequate information to ensure funding of key policy objectives; and, public accountability should generate incentives to support performance objectives. The report identifies aggregate fiscal management as a major weakness, compromised by the significant growth of off-budget activity, while the weakness of the budget system in terms of ability to support decision-making, is equally pernicious. A series of actions to restore fiscal discipline are outlined for the short-term (2001), and initiatives for a multi-year budget commencing in 2002 are included. Recommendations include strengthening the aggregate fiscal program management capacity; reviving policy formulation capacity, and institutional framework to define budgetary policy; and, initiating budget control devolution, introducing a budget performance approach.

Traditionally, economics training in public finances has focused more on tax than public expenditure issues, and within expenditure, more on policy considerations than the more mundane matters of public expenditure management. For many years, the IMF's Public Expenditure Management Division has answered specific questions raised by fiscal economists on such missions. Based on this experience, these guidelines arose from the need to provide a general overview of the principles and practices observed in three key aspects of public expenditure management: budget preparation, budget execution, and cash planning. For each aspect of public expenditure management, the guidelines identify separately the differing practices in four groups of countries - the francophone systems, the Commonwealth systems, Latin America, and those in the transition economies. Edited by Barry H. Potter and Jack Diamond, this publication is intended for a general fiscal, or a general budget, advisor interested in the macroeconomic dimension of public expenditure management.
