### Home - Critical Care Nutrition

Nutrition can have a powerful effect on outcomes. When patients are at nutrition risk, their 30-day readmission rate is 50% higher. 2 By giving patients specialized nutrition, you'll protect the integrity of the GI tract, 3 meaning fewer complications leading to decreased length of stay and avoidable readmissions. 4-7. Your ICU is in a constant race against the clock with the entire healthcare team working towards positive patient outcomes.
