1. Identify your research question. Formulate a clear, well-defined research question of appropriate scope. Define your terminology. Find existing reviews on your topic to inform the development of your research question, identify gaps, and confirm that you are not duplicating the efforts of previous reviews.

**Steps of a Systematic Review**—**Systematic Review**—

Systematic reviews are characterized by a methodical and replicable methodology and presentation. They involve a comprehensive search to locate all relevant published and unpublished work on a subject; a systematic integration of search results; and a critique of the extent, nature, and quality of evidence in relation to a particular research question.

**How to Do a Systematic Review: A Best-Practice Guide for**

Abstract. High quality up-to-date systematic reviews are essential in order to help healthcare practitioners and researchers keep up-to-date with a large and rapidly growing body of evidence. Systematic reviews answer pre-defined research questions using explicit, reproducible methods to identify, critically appraise and combine results of primary research studies.

**How to do a systematic review**—**Alex Pollock; Ervind Berge**—

Doing a Systematic Review is well-structured and tightly-packed with practical advice. It is a rare book which goes beyond the more general student textbooks on writing reviews.

**Doing a Systematic Review: A Student's Guide** | **Online**—

It is so informative and clear and the book is set out in the same way the actual systematic review will be set out i.e. it starts with how to tackle the introduction etc. It really does guide you through the process of a systematic review! Thoroughly recommend this to anyone needing a helping hand with carrying out a systematic review!!

**Doing a Systematic Review: A Student's Guide** | **Boland**—

Systematic reviews may address different types of questions, such as questions about effectiveness of interventions, diagnostic test accuracy, prognosis, prevalence or incidence of disease, accuracy of measurement instruments, or qualitative data.

**How to do a systematic review**—**SAGE Journals**

Systematic reviews require time. 12-24 months is usual from conception to submission. Systematic reviews require a team. 4 or more team members are recommended. A principal investigator, a second investigator, a librarian, and someone well-versed in statistics forms the basic team.

**More about pros and cons of doing a systematic review**—

A systematic review is a highly rigorous review of existing literature that addresses a clearly formulated question. The review systematically searches, identifies, selects, appraises, and synthesizes research evidence relevant to the question using methodology that is explicit, reproducible, and leads to minimum bias.

**A young researcher's guide to a systematic review** | **Edging**—

A systematic review is a form of analysis that medical researchers carry out to synthesize all the available evidence on a particular question, such as how effective a drug is. A meta-analysis is a...

**Doing a Systematic Review: A Student's Guide**—**Google Books**

A systematic review answers a defined research question by collecting and summarising all empirical evidence that fits pre-specified eligibility criteria. A meta-analysis is the use of statistical methods to summarise the results of these studies. Systematic reviews, just like other research articles, can be of varying quality.

**Systematic reviews and meta-analyses: a step-by-step guide**—

Often, conducting a systematic review is a steep learning curve during which you will be developing and refining many new skills, so it's a good plan to keep track – especially for your CV. Managing your files (paper or electronic)

**DOING A SYSTEMATIC REVIEW**—**SAGE Publications Ltd**

A potent means of doing so is that of systematic reviews. The continuous growth of research, coupled with the demand to systematically summarize the available evidence to inform decisions from consumers and stakeholders, led to the formal development of systematic reviews (SRs) in the late 20th century 1-3.

**Why systematic reviews matter**—**Elsevier Connect**

The Preferred Reporting Items for Systematic Reviews and Meta-Analysis (PRISMA) is a 27-item checklist used to improve transparency in systematic reviews. These items cover all aspects of the manuscript, including title, abstract, introduction, methods, results, discussion, and funding. The PRISMA checklist can be downloaded in PDF or Word files.
