service Pumps are designed for deep vacuum work on freeze dryers Seal replacement is needed every 8,000 hours of run time or 1 year Shaft seals and bearings need to be replaced every 16,000 hours or every 2 years Replacing the seals is necessary for achieving deep vacuum and for proper freeze drying

OPERATING MANUAL - JIC Readines S

The Benchmark Freeze Dryers are custom-built production lyophilizers made to meet pilot, clinical supply and production demands. Meeting your current application demands with an eye toward future demand is what we do best.

Benchmark Freeze Dryer & Lyophilizers | Clinical Freeze Dryers

SP is a synergistic collection of well-known, well-established and highly regarded scientific equipment brands - SP VirTis, SP FTS, SP Hotpack, SP Hull, SP Genevac, SP PennTech and most recently SP i-Dositecno - joined to create one of the largest and most experienced companies in freeze drying/lyophilization, complete aseptic fill-finish production lines, centrifugal evaporation and ...

Vacuum apparatus is widely used in research and industrial establishments for providing and monitoring the working environments required for the operation of many kinds of scientific instruments and process plant. The vacuum conditions needed range from the relatively coarse vacuum requirements in applications covering diverse fields such as food packaging, dentistry (investment casting), vacuum forming, vacuum metallurgical processes, vacuum impregnation, molecular distillation, vacuum drying and freeze drying etc. to the other extreme involving the highest possible vacuum as in particle accelerators, space technology -both in simulation and outer space, and research studies of atomically clean surfaces and pure condensed metal films. Vacua commence with the rough vacuum region, i.e. from atmosphere to 100 Pa * passing 6 through medium vacuum of 100 Pa to 0.1 Pa and high vacuum of 0.1 Pa to 1 J.iPa (10- Pa) until ultra high vacuum is reached below 1 J.iPa to the limit of measurable pressure about 12 J.pPa (10- Pa).

This book provides detailed protocols for all the latest methodologies used to assure the long-term biostorage of a diverse range of biological materials. Developed in expert laboratories, the protocols have been painstakingly perfected over the years to provide time-tested, step-by-step instructions that ensure robust and reproducible results. Each protocol deals with the preservation of an organelle, cell, or tissue type, and is accessible even to the nonspecialist because of its cookbook approach. Novel protocols can be readily developed with the help of the "hands-on" Notes sections. Cryopreservation and Freeze-Drying Protocols is an indispensable reference work for both the individual researcher, and all those who want to establish or improve biostorage systems in their laboratories. Its applications range from microbial culture collections, botanic gardens, and zoos to animal husbandry, aquaculture, medicine, human fertilization, and cell and molecular biology

Mycorrhhiza - symbiotic associations between plant roots and fungi - play a major role in many fundamental plant functions such as mineral nutrition or stress resistance. As the link between plants and the soil, mycorrhiza are now of great interest for developing new strategies in sustainable agriculture. Since they allow a decreased use of fertilizer and pesticides, negative impacts on the environment can be minimized. With contributions from renowned international scientists, this manual offers a great variety of practical protocols for analyzing mycorrhiza, including the latest molecular, biochemical, genetical, and physiological techniques.

Based on original contributions by specialists, this manual covers both the theory and the practice required in the management of museums. It is intended for all museum and art gallery profession staff, and includes sections on new technology, marketing, volunteers and museum libraries.
