From a certain point of view, fatigue in composites and fatigue in metals are similar: both begin with damage initiation, followed by damage propagation, and end in ultimate failure. Fatigue life N_f , or number of cycles to failure, for both can

Get Free Fatigue Of Composites Unitn

be thought of as the sum of the cycles during damage initiation N_i and the cycles during damage propagation N_p .

Maximum tensile stress-N fatigue curves of the investigated composites are reported in Figure 2(a). It is immediately evident the relatively low fatigue sensitivity of CF200 laminate, while the higher tensile strength of BF200 with

Get Free Fatigue Of Composites Unitn

respect to GF200 is responsible for the better fatigue performance of the basalt laminate.
