The cell is the basic living unit of the human body—indeed, of all organisms. The human body consists of trillions of cells, each capable of growth, metabolism, response to stimuli, and, with some exceptions, reproduction. Although there are some 200 different types of cells in the body, these can be grouped into four basic classes.

The human body is a complex machine that carries out multiple jobs at the same time. The smallest unit of life in the human body is a cell. A group of similar cells that work together to carry out a function make up a tissue. In turn, different tissues are organized.

**Human Body Worksheets - TheWorksheets.Com**

Basic form and development In general structure, the human body follows a plan that can be described as a cylinder enclosing two tubes and a rod. This body plan is most clearly evident in the embryo; by birth, the plan is apparent only in the trunk region—i.e., in the thorax and abdomen. The body wall forms the cylinder.
