In *Metaphysical Perspectives*, Nicholas Rescher offers a grand vision of how to conceptualize, and in some cases answer, some of the most fundamental issues in metaphysics and value theory. Rescher addresses what he sees as the three prime areas of metaphysical concern: (1) the world as such and the architecture of nature at large, (2) ourselves as nature's denizens and our potential for learning about it, and (3) the transcendent domain of possibility and value. Rescher engages issues across a wide range of metaphysical themes, from different worldviews and ultimate questions to contingency and necessity, intelligent design and world-improvability, personhood and consciousness, empathy and other minds, moral obligation, and philosophical methodology. Over the course of this book, Rescher discusses, with his characteristic fusion of idealism and pragmatism, an integrated overview of the key philosophical problems grounded in an idealistically value-oriented approach. His discussion seeks to shed new light on philosophically central issues from a unified point of view.

Is there a universal consciousness in whose consciousness we live, move, and have our being? The exploration of consciousness is the final frontier in the exploration of life and the mysteries of existence – its origin, its on-going presence – as well as for answering questions that intellectual analysis cannot answer because it is based on the speculations of the five senses. Consider then that within every human being there are simultaneous states of existence that are active – predating human life, during human life, and beyond human life. Participate in this world of illusions but always retain the light of universal awareness, wherever your soul's purpose path may lead you. – Dr. Paul Leon Masters

Systematic metaphysics is defined by its task of solving metaphysical problems through the repeated application of single, fundamental ontology. The dominant contemporary metaphysic is that of neo-Humeanism, built on a static ontology typified by its rejection of basic causal and modal features. This book offers a radically distinct metaphysic, one that turns the status quo on its head. Starting with a foundational ontology of inherently causal properties known as "powers", Neil E. Williams develops a metaphysic that appeals to powers in explanations of causation, persistence, laws, and modality. Powers

are properties that have their causal natures internal to them: they are responsible for the effects in the world. A unique account of powers is advanced, one that understands this internal nature in terms of blueprint of potential interaction types. After the presentation of the powers ontology, Williams offers solutions to broad metaphysical puzzles, some of which take on different forms in light of the new tools that are available. The defence of the ontology comes from the virtues of metaphysics it can be used to develop. Particular attention is paid to the problems of causation and persistence, simultaneously solving them as it casts them in a new light. The resultant powers metaphysics is offered as a systematic alternative to neo-Humeanism.

Every Thing Must Go argues that the only kind of metaphysics that can contribute to objective knowledge is one based specifically on contemporary science as it really is, and not on philosophers' a priori intuitions, common sense, or simplifications of science. In addition to showing how recent metaphysics has drifted away from connection with all other serious scholarly inquiry as a result of not heeding this restriction, they demonstrate how to build a metaphysics compatible with current fundamental physics ('ontic structural realism'), which, when combined with their metaphysics of the special sciences ('rainforest realism'), can be used to unify physics with the other sciences without reducing these sciences to physics itself. Taking science metaphysically seriously, Ladyman and Ross argue, means that metaphysicians must abandon the picture of the world as composed of self-subsistent individual objects, and the paradigm of causation as the collision of such objects. Every Thing Must Go also assesses the role of information theory and complex systems theory in attempts to explain the relationship between the special sciences and physics, treading a middle road between the grand synthesis of thermodynamics and information, and eliminativism about information. The consequences of the author's metaphysical theory for central issues in the philosophy of science are explored, including the implications for the realism vs. empiricism debate, the role of causation in scientific explanations, the nature of causation and laws, the status of abstract and virtual objects, and the objective reality of natural kinds.

Some of the world's specialists provide in this handbook essays about what kinds of things there are, in what ways they exist, and how they relate to each other. They give the word on such topics as identity, modality, time, causation, persons and minds, freedom, and vagueness.

What is truth? What role does truth play in the connections between language and the world? What is the relationship between truth and being? The Metaphysics of Truth tackles these fundamental philosophical questions and develops a distinctive metaphysical worldview. Moreover, it does so in a climate where the traditionally central issue of the nature of truth has diminished in significance due to the rise of deflationary and primitivist views, which deny that there are interesting and informative things to say about truth. Douglas Edwards responds to these views, and demonstrates the importance of the metaphysics of truth with regard to both the study of truth itself, and metaphysical debates more generally. He also develops a detailed pluralist metaphysical approach, which starts with the diversity of different subject areas, and holds that there are different relationships between language and the world in different areas, or 'domains'. He develops a pluralist approach which explains what domains are; how different domains are individuated; which metaphysical frameworks apply in different domains; and how truth plays a key role in the picture. The picture is extended to incorporate ontological pluralism - the idea that there are different ways of being - which increases the explanatory power of the view. Edwards gives particular attention to important domains which have not yet received a great deal of attention in debates about truth, namely the institutional and social domains, and thus connects work on the metaphysics of truth and being to key issues in social construction.

Provides a minimal metaphysics for scientific practice, yielding new accounts of lawhood, causation and reduction.

Robert Stalnaker draws together in this volume the extent of his work in metaphysics. The central theme is the role of possible worlds in articulating our various metaphysical commitments. The essays presented reflect on the nature of metaphysics, with two of the essays featured being published for the first time.

The Metaphysics of Experience styles itself as "a Sherpa guide to Process and Reality, whose function is to assist the serious reader in grasping the meaning of the text and to prevent falls into misinterpretation." Although originally published in 1925, Process and Reality has perhaps even more relevance to the contemporary scene in physics, biology, psychology, and the social sciences than it had in the mid-twenties. Hence its internal difficulty, its quasi-inaccessibility, is all the more tragic, since, unlike most metaphysical endeavors, it is capable of interpreting and unifying theories in the above sciences in terms of an organic world view, instead of selecting one theory as the paradigm and reducing all others to it. Because Alfred North Whitehead is so crucial to modern philosophy, The Metaphysics of Experience plays an important role in making Process and Reality accessible to a wider readership.
