Information is first presented on the structural properties of hypomineralized enamel, the prevalence of MIH, and potential etiological factors. Subsequent chapters focus on key considerations in clinical practice. Diagnostic criteria, classifications, and treatment strategies are discussed and detailed attention is devoted to potential associations between MIH and caries, the occurrence of hypomineralized primary teeth, and the knowledge and experience of dentists concerning MIH. In the last part of the book, the different treatment options are systematically presented and reviewed, covering pain control, prophylaxis and desensitization, fissure sealing, direct and indirect restorations, and extraction therapy. The cost-effectiveness of the available

Clinical book discusses the known causes of defective dental enamel and explains why it is so difficult to restore. Most importantly, it presents the signs and symptoms that allow accurate diagnosis and documents the best contemporary management. The full range of enamel defects is considered, including defects in primary teeth and permanent teeth, associated syndromes, molar incisor hypomineralization, and genetic defects. The clinical chapters are well illustrated, providing clear guidelines for each procedure. In addition, avenues for future research are identified, with explanation of their rationale.

Geriatric dentistry, or gerodontics, is the branch of dental care dealing with older adults involving the diagnosis,

ABSTRACT: Helping patients achieve an optimal quality of life through patient-centered treatment planning should be the ultimate goal of all oral health care providers. However, this issue extends beyond the realm of the individual clinician's office. This text presents quality-of-life research from various fields, including psychology, public health, and general health care; discusses how a patient-centered approach can be applied to basic oral and craniofacial research, clinical dental practice, community dental

health issues, and dental education; and addresses how oral health-related quality of life relates to treating and understanding different patient populations, such as children with special needs, medically compromised patients, patients with oral cancer, and patients with chronic facial pain. Also discussed is how factors such as race/ethnicity, gender, and age can affect oral health-related quality-of-life concerns and treatment strategies. Finally, the book offers an outlook on the role that oral health-related quality of life will play in future research and dental education.
